How to
Play
with
Makey Makey

How to Play with Makey Makey

1

Plug in USB. The small side of USB cable plugs into Makey Makey, and the big side plugs into the computer.

2

Connect one end of an alligator clip to "earth," located on the bottom of the front side of the Makey Makey. Connect yourself by holding the metal part of the other end of this earthed clip. This earthed clip can be connected to a conductive material.

3

Clip additional alligator clips to corresponding buttons you want to use. These clips can also be connected to conductive materials. Tap the conductive materials in order to 'click' on the corresponding button.

4

OK...so what kinds of materials will conduct well?

Play Doh

Bananas

Skin

Aluminum foil

Graphite pencil drawings

Other fruits and vegetables

Gummy Candies

coins

Forks, Spoons, Knives (metal)

Pots and Pans

But it won't work!

- Make sure you Makey Makey is plugged into the computer.
- Hold the earthed clip firmly.
- Tap—do not hold— the other clip you wish to access.
- When you are making a connection using other materials, they must be conductive.
