# Downloading mp3s using Freegal

You can download *3 songs per week per library card*.
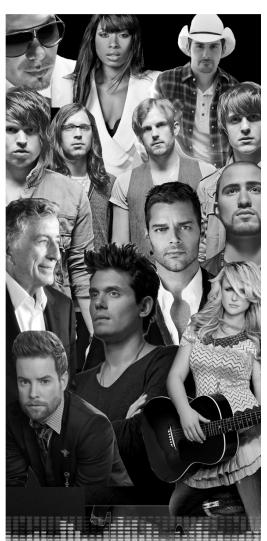

Choose from millions of songs from 10,000 labels,

including Sony Music Entertainment.

It's easy . . .

- Go to monroetwplibrary.org and click on the Download MP3s icon

- Enter your 14 digit library card number and PIN

- Find the songs you want by browsing the collection or search by title, artist, genre

- Click on download for the song you wish to have

- The song will open in your default music program (iTunes, WindowsMedia Player, etc.)

- You can then transfer songs to your portable music device the same way you would for any other music on your computer

- There are Android and iOS apps available to use on your mobile devices

MONROE TOWNSHIP LIBRARY

I downloaded a song, but I can't find where it is on my computer.
We highly recommend that when downloading a song, you select the option to save the file to a specific location on your computer. However, if you didn't specify a location or you opted to open the file without saving it, there are a couple things you can try to locate where the song was saved.

If you are using Windows Media Player...

1. Open Windows Media Player

2. Click on the File menu

3. Toward the bottom of the menu, you should see a list of all recently played music

4. Click on the song file you got from Freegal, this should cause it to play

5. While in the Now Playing mode (you can click on the "Now Playing" tab to get there), you should see the song listed under Now Playing

6. Right-click on the song title and select Properties from the menu

7. You should now be able to see where the file has been saved to on your computer, listed next to "Location:" in the properties window

8. From the Properties window, you can also select "Open file location" and this will cause a dialog box to open the folder that contains the file. From there you can copy or drag it to your desktop or wherever else you'd like to keep it

If you're using iTunes...

1. Open iTunes

2. Locate the song in your music

3. Right-click on the song title

4. Select "Get Info"

5. Select the "Summary" tab (by default it's the tab that's open in the "Get Info" dialog box)

6. Toward the bottom of the dialog box, there is a "Where" section which tells you the folder path where the song is located

You may find through Windows Media Player or iTunes that the song file is located in a Temporary Internet File. You can go to "My Computer" from the Start menu on your computer and double-click through each of the folders listed in the "Location:" or "Where" box (depending on which media player you are using). Typically you'd start with your C: drive (usually called the Local Hard Disk), then click through "Documents and Settings" then the next folder and so on to get to the song MP3 file. Once you get to the file, you can then drag it (or copy and paste it) to another location (your desktop for example).
